### **Textile raw materials, piece-goods for industry, textile waste collection and recycling.**

**GREEN LINE** activity takes place in three essential phases:

- 1-** Textile waste collection: by different means with containers we collect directly from the factories producing waste material (knitwear, clothes and cutting factories, spinning and weaving mills).
- 2-** Selection and pressing: when the goods arrive in our factory, we carefully select, press and stock them.
- 3-** Dispatch to the recycling facilities: we sort the different kinds of material out, then send them to the factories specialized in working raw materials (spinning mills, shoddy makers, garneting mills).
